CASE STUDY

Elevāt IoT:

The Platform Behind IQAN Connect Continues

Background

In 2015, Elevāt collaborated with Parker Hannifin to develop IQAN Connect, a connected solution for off-highway equipment that enabled diagnostics, machine data access, and remote service. **As Parker discontinues support for the platform, Elevāt now offers a fully supported, next-generation solution** that retains the original foundation while expanding capabilities to meet evolving OEM requirements.

Challenge

OEMs that have relied on IQAN Connect for critical diagnostics and service operations now face the **risk of losing essential functionality.** With support ending, these manufacturers require a trusted solution that preserves operational continuity, maintains tool compatibility, and delivers long-term platform stability.

Why Elevāt IoT

Elevāt offers a **dependable, future-ready platform designed specifically for OEMs.** With proven success in connected equipment systems, Elevāt ensures continuity while delivering improved performance, greater visibility, and long-term value. **OEMs choosing Elevāt gain:**

Seamless transition with continued support for Parker IQAN tools and workflows.

Flexible hardware options to accommodate a range of machine configurations.

Advanced diagnostics that enable early issue detection and proactive service.

Improved efficiency and cost control through smarter data visibility and streamlined service routines.

Secure, compliant infrastructure aligned with North American data privacy requirements and GDPR standards.

Elevāt IoT Solution Overview

Elevāt developed the core technology behind IQAN Connect and has continued to advance its capabilities within the Elevāt Platform.. **The platform delivers greater flexibility, deeper diagnostics, and broader integration options, while ensuring a smooth transition for current users.**

Key platform features include:

Real-time monitoring of system health and component performance

Automated maintenance alerts based on usage and fault data

Digital service records and electronic compliance tracking

Custom dashboards and configurable reporting

O**ver-the-air software updates** and secure data architecture

Results

OEMs that have transitioned to Elevāt IoT report measurable benefits across their operations:

Zero disruption during migration

Continued use of existing tools and workflows with support

Faster issue diagnostics and resolution with proactive monitoring

Reduced operating costs through smarter visibility

Scalable, secure platform for long-term reliability

Conclusion

Elevāt IoT builds on the foundation of IQAN Connect, offering enhanced functionality, continued compatibility, and long-term platform support.

The transition is proven in the field, with no disruption to operations and immediate gains in visibility, diagnostics, and performance.
